## 1. Introduction

### Background

The Government stated, in the Coalition Agreement, its intention to create a new designation to protect green areas of particular importance to local communities. This intention has been restated in the Natural Environment White Paper and the draft National Planning Policy Framework. The County Council decided to prepare for the new designation by assembling evidence which would assist its implementation. This has been done by proactively engaging with local communities to understand which green spaces they value, including through the 27 community forums in Leicestershire and the use of an innovative online tool. The County report sets out the findings of this engagement exercise across the County. It is accompanied by 27 reports, of which this report is one, which set out the findings for each individual Community Forum area, and by a website [www.lsr-online.org/greenspacesresults](http://www.lsr-online.org/greenspacesresults) which gives local communities access to the data collected.

Understanding which green spaces local people particularly value, and why, will help local communities and councils decide where new homes and other developments needed by local communities are best located, designate local green spaces, and decide what steps might be taken to protect and enhance green spaces.

### What is a Green Space?

A green space is generally defined as a managed or more natural space, which is either publicly accessible and / or provides visual amenity. The visual amenity might be to retain an important view within or beyond a settlement, or on a larger scale, such as green wedges, to prevent the merging of settlements, guide development form, provide a green lung and act as a recreational resource.

The draft National Planning Policy framework states that the local green space designation would only be appropriate where green space:

- is demonstrably special to a local community,
- is in reasonable close proximity to a centre of population,
- is local in character and not an extensive tract of land; and,
- does not overlap with Green belt.

This engagement exercise particularly collects information in relation to the first of the above bullet points. In designating local green spaces local councils and communities will also need to take account of the other requirements listed.

In running the county-wide engagement exercise, however, the

County Council did not start by defining what a green space is. The key purpose of the exercise was to allow local communities and residents to tell the County Council about which areas of open land are particularly valuable to them. The findings set out in this report, represent therefore, the views of local communities about green spaces in their area with no restrictions placed on what local communities could describe as a green space. In developing and implementing a local green spaces designation local councils and communities will need to do so in the context of national planning guidance and this may mean that some green spaces, such as for examples those which constitute 'an extensive tract of land', will not be eligible for designation.

### **The Consultation Exercise**

The green spaces engagement exercise was carried out between January and April 2011. It involved two main components; an interactive exercise at each Community Forum across the County, and an online map-based tool **[www.lsr-online.org/greenspaces](http://www.lsr-online.org/greenspaces)**. In addition, comments were sent in by post and e-mail, and comments were also sent in by parish and town councils. All comments received have been taken into account.

The engagement exercise was well-received and increased attendance at many of the Community Forum meetings, by a substantial amount at some. The online tool piloted a new technique for community engagement and its success has demonstrated its potential application for other engagement exercises. Thank you for your input.

### **Reporting the results back to the community**

The exercise has generated a rich dataset. This has been analysed and the data is being presented in ways which make it easy to understand and easy for local communities to make effective use of. The information collected is being reported back to communities and parish and town councils in the following ways:

- By making the collected data available online **[www.lsr-online.org/greenspacesresults/](http://www.lsr-online.org/greenspacesresults/)** to local communities, parish and town councils and partner agencies so they can themselves use it in future neighbourhood and local planning activities;
- By presenting back to each Community Forum the results for that area;
- By producing for each Community Forum area a summary report setting out findings;

- By producing this County-wide summary report setting out the overall findings.

### **Data issues to be aware of when using this report**

Considerable effort has been made throughout the processing of the data utilised within this report to ensure that it is accurate and consistent and provides a fair representation of views across Leicestershire. This has, however, been an exercise which has utilised new, innovative engagement tools and it is, therefore, important to be mindful of the following caveats when reading the report:

- While consultation was open to everybody, the respondents were self selecting, and certain types of people may have been more likely to contribute than others. In this instance, it is likely that some of those participating were more aware of, and engaged with, the green space debate and not, therefore, representative of the population as a whole.
- Many responses were made during public meetings and therefore may have been influenced, to some degree, by others attending those meetings.
- The location of Community Forum meetings may have influenced which local people were able to

attend and which green spaces were identified as valued.

- Across the different elements of the consultation, participants received differing levels of information about the subject. Some responses, therefore, are based on more information than others.
- The likelihood of a green space being 'lost' may have influenced the number and nature of responses received about green spaces. For example there might be highly valued green spaces which did not generate high numbers of responses because they are already considered to be protected by other designations (for instance as a country park or a site of special scientific interest). Conversely some green spaces may have been attributed a higher value at the time of the engagement exercise than they might have been at other times because they were considered under threat. In this context it is possible that local campaigns around particular proposed local plan allocations, planning applications and other perceived threats of development, will have generated a higher response rate. The engagement response marks, therefore, a snapshot in time.

- For analytical purposes green spaces were assigned to one community forum area. Those that spanned the borders of two or more community forums were assigned to the community forum in which they had their highest proportional coverage.
- The same people could have attended a forum and also used the online tool.

### County Results

Across Leicestershire residents identified 3,114 'green spaces' through the consultation exercise as being valued by local communities. Of the total number of green spaces identified, 2,002 were identified at Community Forum meetings (attended in total by 1,200 people), and a further 1,112 were identified online, by 730 individual respondents.

However, green spaces that spanned more than one Community Forum were double counted to ensure that all areas were identified to the Community Forums they covered. Therefore, in total, the online consultation identified 1,791 green spaces and Forum data identified 2,457 green spaces.

Map 1 shows all the areas selected from the online and forum consultation. As there is a large amount of overlap of selected areas in this map, the bottom map is an intensity map that provides an overview of where this overlap occurs.

**Map 1: Total County Results**

**Map 2: Total County intensity map**

## 2. Blaby North Forum and Online results

### Headline Summary

- In Blaby North **110** 'green spaces' have been identified through the consultation exercise as being valued by local communities.
- Of the total number of green spaces identified **52** were identified at Community Forum meetings (attended in total by **35** people), and a further **58** were identified online.
- Overall, **10.4 km<sup>2</sup>**, or **53%**, of the forum land area was nominated as a green space. Further results are presented graphically on the dashboard on page 10.

Reporting results at a Community Forum level poses a particular problem because a sizeable proportion of recorded green spaces cut across a number of Community Forums. So the difficulty is whether to record the area just the once, and assign it to just one Forum, or to record it multiple times against each Forum. Since the aim of the report is to report back any area that should be considered of value to the local community, any cross-cutting green spaces have been counted multiple times and therefore identified to each relevant Community Forum.

### Count of Online and Forum green spaces by Community Forum

### **Forum meeting feedback**

The Green Spaces interactive exercise undertaken at the forum meeting was constructive, with about 35 participating.

The following descriptions aim to provide a general summary of the views held at the forum compared to results from all the other forums held in the County. More detailed explanation of these findings is in the County Report on green spaces.

#### **1. What spaces were valued?**

Overall, respondents in this forum mainly value green space for the opportunity it gives them to walk their dogs and to take in the natural surroundings (within a traffic free area). In this segment the green space was more often than not identified as a park. The prospect of peace and quiet is also valued as the physical beauty.

#### **2. What spaces were important?**

Overall, respondents in this forum mainly state that the importance of their selected green space derives from the benefits it offers to people within a 'natural' space.

Respondents state that the green space is a mainly natural environment (car-free with a mixture of water, openness, trees, shrubs, etc). They argue that this promotes a space which is vital for community cohesion and spirit as it can be a venue for hosting functions/events. Additionally, others view the green

space as an area to walk and explore.

#### **3. How can spaces be improved ?**

Overall, respondents in this forum mainly agree that their identified green space requires improvements to facilities, whether they are maintained, upgraded or simply required in the first place. These include improving/providing allotment plots, toilets, more play facilities and changing rooms for home and visiting sports teams. In one or two instances a community centre was cited as a worthwhile addition.

Respondents stated that they do not wish to see commercial buildings developed.

## Blaby North

### Summary of forum and online results

total spaces in area:	110
total spaces from online:	58
total spaces from forums:	52

### Summary of what people valued

Respondents in this forum value green space for the opportunity it gives them to walk their dogs and to take in the natural surroundings (within a traffic free area). The green space was more often than not identified as a park. The prospect of peace and quiet is also valued as the physical beauty.

### Profile of forum

total population:	37,908
urban population:	37,908
rural population:	0
area of forum:	19.7 km <sup>2</sup>

### Community forum results

Date: 07-03-11 Venue: Sparkenhoe Committee Room, attendance: 35

#### 1. About the areas nominated

# of spaces nominated at forum event:	48
# of spaces nominated from another forum event:	6
% of forum land area nominated as green space:	9%
total area nominated: (km <sup>2</sup> )	1.77

#### 2. Type of Green Space

Recreational	15
Natural	13
Landscape	6
Community	13

#### 3. Value, importance and improvement

<b>Why value?</b>	
area	17
walking	12
<b>Most important?</b>	
area	11
space	9
<b>How Improve?</b>	
leave	4
seats	4

### Online results (from [www.lsr-online.org/greenspaces](http://www.lsr-online.org/greenspaces))

The Consultation ran from 31st January to 19 April 2011

#### 1. About the areas nominated

# of areas nominated from online:	58
% selected by forum resident:	34%
% of forum land area nominated from online:	51%
total area nominated (km <sup>2</sup> ):	10.1

#### 3. About the responses

avg response per person	1.1
max respondent by a person	6

#### 2. The type, value and importance

<b>Type of space?</b>	
Farm land	16
Public right of way	12
<b>Why Value?</b>	
Close to where I live	21
Openness	19
<b>Why Important?</b>	
Community	16
Landscape	13

### 3. Where were green spaces selected?

Map 3 : Map of community forum area

Map 4: Areas selected at community forum consultation

**Summary:** A number of areas to the east of Glenfield including the Old Railway rack, Glebe Farm and although outside the forum, Western Park Golf Course

### Map 5: Areas selected from online consultation

**Summary:** A number of large areas spread across the forum including to the east of Glenfield, to the South of Kirby Muxloe and number on the southern boundary that are covering Lubbesthorpe.

### Map 6: Intensity map

As boundaries can be placed exactly on top of one another, thus making it difficult to see how many boundaries there actually are, this intensity map highlights the number of times each small square of land is included from the previous two maps. So an increase in the intensity of the colour, corresponds to a percentage increase in the number of times a given square has been chosen.

## 4. Comments from the Blaby North forum held on the 7th March 2011

### The Value, Importance and improvement of green spaces

At each forum people were asked to answer questions, around the value, importance and value of the green space they nominated. These were open-ended questions to encourage a full and meaningful answer using the subject's own knowledge and/or feelings of the area. However this does make the data harder to analyse and report back. A tag cloud is a visual representation for text data, typically used to visualize text. 'Tags' are usually single words, normally listed alphabetically, and the importance of each tag in the following pages is represented with font size or colour. This format is useful for quickly perceiving the most prominent terms and for locating a term alphabetically to determine its relative prominence.

Value	Similar to County responses.
Importance	Similar to County responses.
Improvement	Different from the County. Focusing on the words <b>seats, lighting, litter and shelter</b>

### Why do you value the green space?

## 5. Parish Response

LFE Parish Council identified the green spaces between Braunstone Town, Enderby and LFE of most value. Plus the green space between Beggars Lane and Desford Cross Roads. Braunstone Town highlighted several green spaces in the area e.g. allotments, parks, playing fields.

Kirby Muxloe Parish Council outlined green spaces bordered by the Kirby Muxloe Golf club, Station Road, Barry Drive, Hinckley Road up to the farm track leading to Oaks Farm and then on to the golf course. Green Spaces bordered by the M1, Ratby Lane (Blood's Hill), along the back of the Castle and weir, then along by the side of the stream until it meets then railway track, then back up to the side of the M1. Green Spaces along Hinckley Road until it meets the footpath leading to Gullet Lane, take the line along Gullet Lane and then let it follow the boundary line until it meets Desford Lane.
