What have we learnt in the PHOF update?

1. Life expectancy at both birth and 65 years old has decreased for both sexes, with life expectancy at 65 years old for males now performing statistically similar to the national average.

- Life expectancy at birth for males has decreased from 81.0 years in 2019 to 79.9 years in 2020. This continues to be significantly better than the national figure of 78.7 years. Leicestershire has performed significantly better than the national figure since this indicator was first recorded in 2001.
- Life expectancy at birth for females has decreased from 84.6 years in 2019 to 83.7 years in 2020. This continues to be significantly better than the national figure of 82.6 years. Leicestershire has performed significantly better than the national figure since 2006.

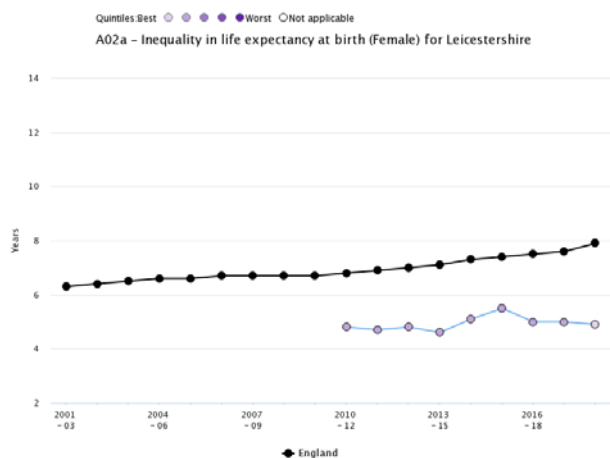

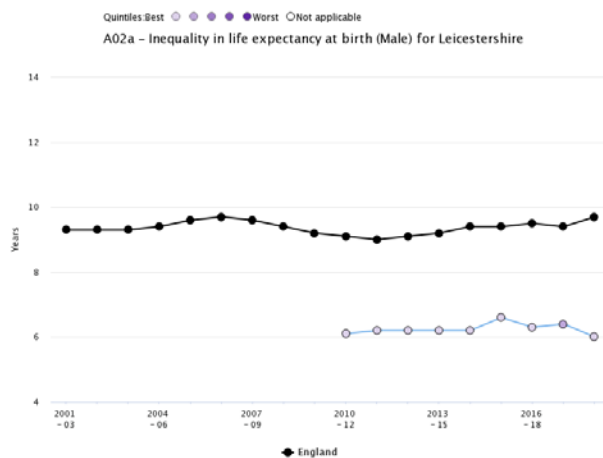

- Life expectancy at 65 for males has decreased from 19.7 years in 2019, where Leicestershire performed significantly better than the national average, to 18.3 years in 2020. Leicestershire now performs statistically similar to the national average of 18.1 years.
- Life expectancy at 65 for females has decreased from 22.2 years in 2019 to 21.4 years in 2020. This continues to be significantly better than the national figure of 20.7 years. Leicestershire has performed significantly better than the national figure since 2007.

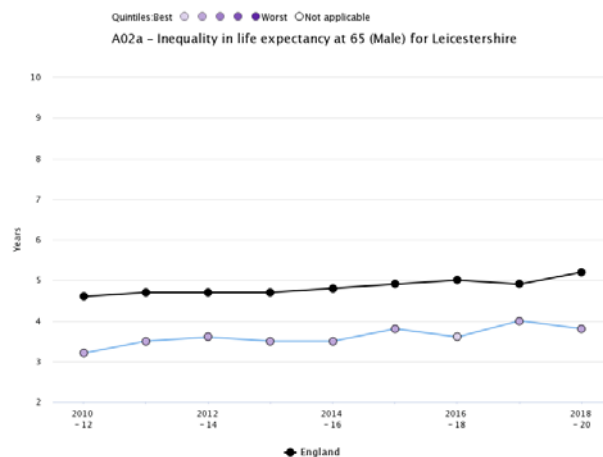

2. The inequality in life expectancy at birth for both sexes and the inequality in life expectancy at 65 for females now all perform in the best quintile nationally.

- The inequality in life expectancy at birth for males has decreased from 6.4 years in 2017-19, where Leicestershire performed in the 2nd best quintile nationally, to 6.0 years in 2018-20. Leicestershire now performs in the best quintile nationally.
- The inequality in life expectancy at birth for females has decreased from 5.0 years in 2017-19 to 4.9 years in 2018-20. Leicestershire now performs in the best quintile nationally for the first time, whereas previously it had been performing in the second best quintile nationally since 2010-12.

- The inequality in life expectancy at 65 for males has decreased from 4.0 years in 2017-19 to 3.8 years in 2018-20, with Leicestershire continuing to perform in the 2nd best quintile nationally. Leicestershire has performed in the 2nd best quintile nationally for this indicator since records began in 2010-12, apart from in 2016-18 where it performed in the best quintile in England.
- The inequality in life expectancy at 65 for females in 2018-20 has remained the same at 3.0 years. However, Leicestershire now performs in the best quintile nationally whereas in 2017-19 it was performing in the 2nd best quintile nationally.

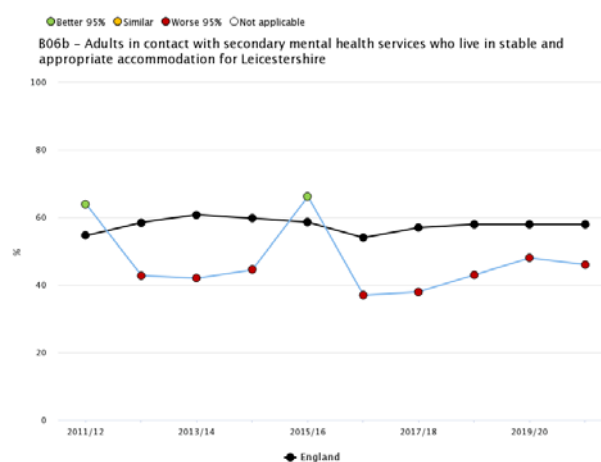

3. The proportion of 16-17 year olds not in education, employment, or training (NEET) or whose activity is not known has decreased and is now significantly better than the national figure.

- The percentage of 16-17 year olds NEET or whose activity is not known in Leicestershire has decreased from 8.3% in 2019, which was significantly worse than the national average, to 4.7% in 2020. Leicestershire now performs significantly better than the national figure of 5.5%.
- Over the last five data points, the trend of the percentage of 16-17 year olds NEET or whose activity is not known in Leicestershire has witnessed no significant change.

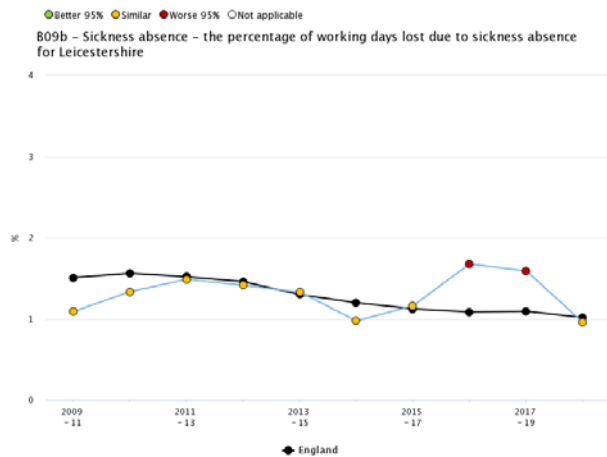

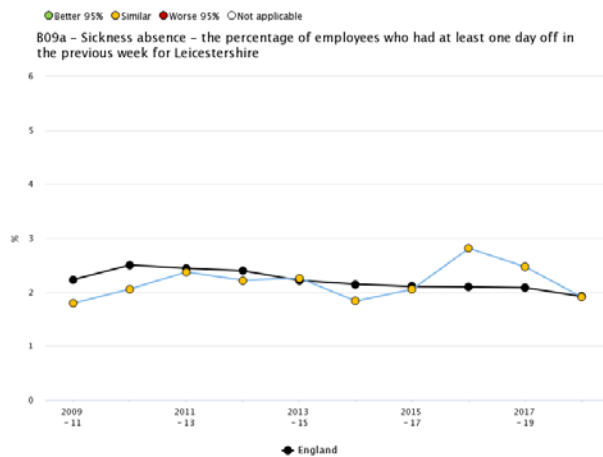

4. The percentage of adults with a learning disability and the percentage of adults in contact with secondary mental health services, who live in stable and appropriate accommodation, continue to perform significantly better and significantly worse than England respectively.

- The proportion of adults with a learning disability who live in stable and appropriate accommodation in Leicestershire has increased from 82.9% in 2019/20 to 84.3% in 2020/21. Leicestershire continues to perform significantly better than the national average of 78.3% for this indicator.
- Over the last five data points, the percentage of adults with a learning disability who live in stable and appropriate accommodation in Leicestershire has shown a significant increasing and improving trend.
- The proportion of adults in contact with secondary mental health services who live in stable and appropriate accommodation in Leicestershire has decreased from 48.0% in 2019/20 to 46.0% in 2020/21. Leicestershire continues to perform significantly worse than the national average of 58.0% for this indicator and has performed significantly worse than England since 2016/17.

5. Both the percentage of employees who had at least one day off in the previous week and the percentage of working days lost due to sickness absence are statistically similar to the national figure.

- The percentage of employees who had at least one day off in the previous week in Leicestershire has decreased from 2.5% in 2017-19 to 1.9% in 2018-20 and continues to perform statistically similar to the national average of 1.9%. Leicestershire has performed statistically similar to England since the recording of the indicator began in 2009-11.
- The percentage of working days lost due to sickness absence in Leicestershire has decreased from 1.6% in 2017-19, where Leicestershire performed significantly worse than England, to 1.0% in 2018-20. Leicestershire now performs statistically similar to the national average of 1.0%

6. The percentage of births with a low birth weight has decreased and continues to be significantly better than the national average.

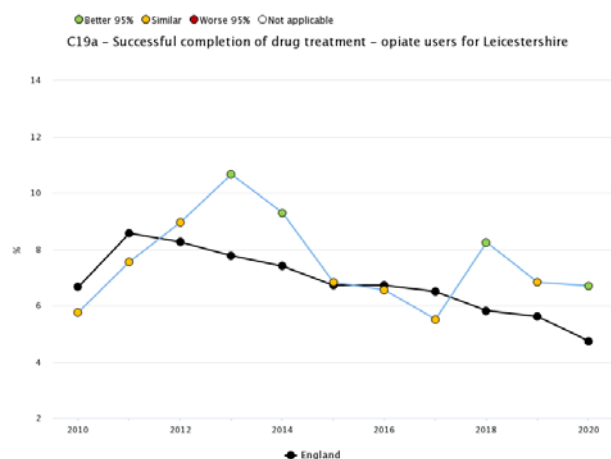

- The proportion of all live births in Leicestershire with a low birth weight has decreased from 2.42% in 2019 to 2.17% in 2020. Leicestershire continues to perform significantly better than the national average of 2.86% and has performed significantly better than England since 2019.
- Over the last five data points, the trend of the percentage of percentage of births with a low birth weight Leicestershire has witnessed no significant change.

7. The percentage of opiate and non-opiate users successfully completing drug treatment and the percentage of alcohol users successfully completing alcohol treatment is now significantly better than the national average.

The figures presented are for Leicestershire and Rutland combined for these indicators

- The percentage of opiate users in treatment that left drug treatment successfully in Leicestershire and Rutland has decreased from 6.8% in 2019, where Leicestershire and Rutland performed statistically similar to the national value, to 6.7% in 2020. Despite this decrease, Leicestershire and Rutland now performs significantly better than the national average of 4.7%.
- The percentage of non-opiate users in treatment that left drug treatment successfully in Leicestershire and Rutland has increased from 34.6% in 2019, where Leicestershire performed statistically similar to the England average, to 45.0% in 2020. Leicestershire and Rutland now perform significantly better than the national average of 33.0% for the first time since 2010.

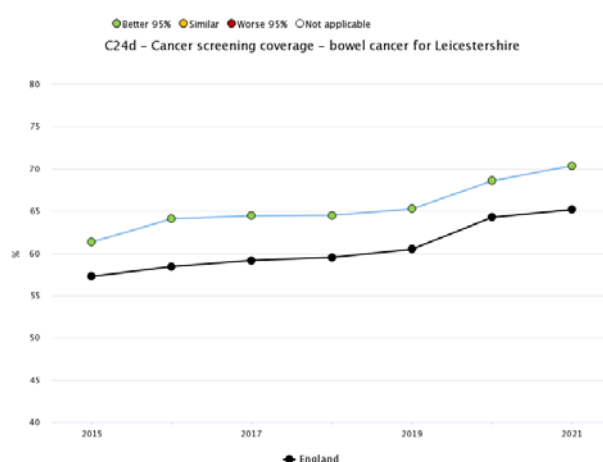

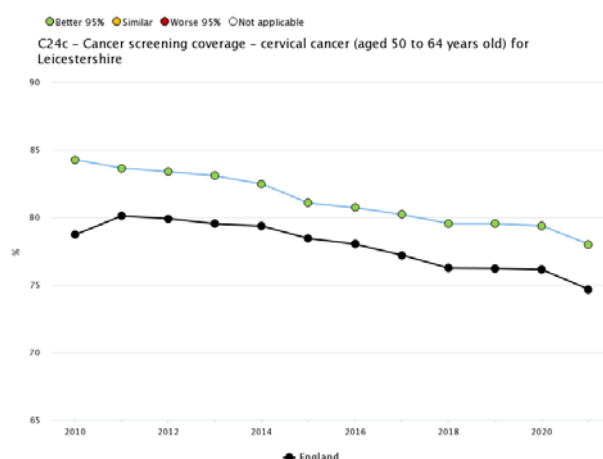

- The percentage of alcohol users in structured treatment that left structured treatment successfully in Leicestershire and Rutland has increased from 36.6% in 2019, where Leicestershire and Rutland performed statistically similar to England, to 42.1% in 2020. Leicestershire and Rutland now perform significantly better than the national average of 35.3%.

8. Cancer screening coverages have shown a mixed picture of trends.

- Breast cancer screening coverage has decreased from 77.6% in 2020 to 64.9% in 2021. Leicestershire continues to perform significantly better than the national average of 64.1% and has been performing significantly better since the recording of the indicator began in 2010.
- Over the last five data points, the breast cancer screening coverage in Leicestershire has shown a significant decreasing and worsening trend.
- Cervical cancer screening coverage for females aged 25 to 49 years has decreased from 76.9% in 2020 to 74.2% in 2021. Leicestershire continues to perform significantly better than the national average of 68.0% and has been performing significantly better since the recording of the indicator began in 2010.
- Over the last five data points, the cervical cancer screening coverage for females aged 25 to 49 years in Leicestershire has not shown a significant trend.
- Cervical cancer screening coverage for females aged 50 to 64 years has decreased from 79.4% in 2020 to 78.0% in 2021. Leicestershire continues to perform significantly better than the national average of 74.7% and has been performing significantly better since the recording of the indicator began in 2010.
- Over the last five data points, the cervical cancer screening coverage for females aged 50 to 64 years in Leicestershire has shown a significant decreasing and worsening trend.
- Bowel cancer screening coverage has increased from 68.6% in 2020 to 70.4% in 2021. Leicestershire continues to perform significantly better than the national average of 65.2% and has been performing significantly better since the recording of the indicator began in 2015.
- Over the last five data points, the bowel cancer screening coverage in Leicestershire has shown a significant increasing and improving trend.

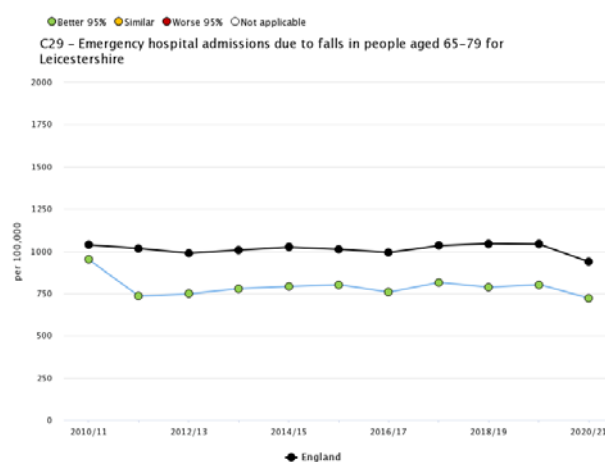

9. The rate of emergency hospital admissions due to falls in aged 65+ people has decreased and continues to be significantly better than the national average.

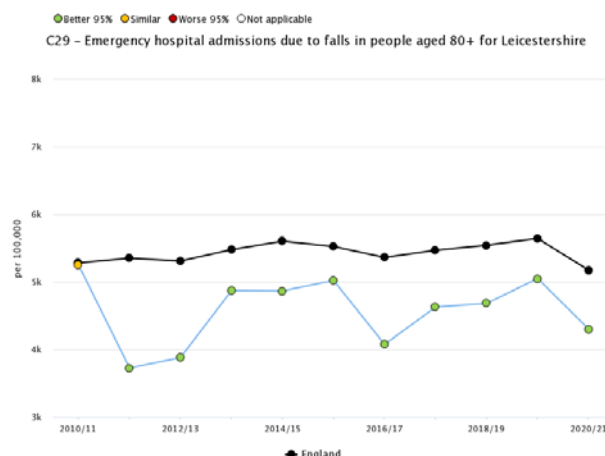

- The rate of emergency hospital admissions due to falls in people aged 65 and over in Leicestershire per 100,000 population has decreased from 1,891 in 2019/20 to 1,641 in 2020/21. This equates to a decrease of 320 emergency hospital admissions.
- Leicestershire continue to perform significantly better than the national average and has performed significantly better since 2011/12.

- The rate of emergency hospital admissions due to falls in people aged 65-79 in Leicestershire per 100,000 population has decreased from 802 in 2019/20 to 722 in 2020/21. This equates to a decrease of 60 emergency hospital admissions.
- Leicestershire continue to perform significantly better than the national average and has performed significantly better since records began in 2010/11.

- The rate of emergency hospital admissions due to falls in people aged 80 and over in Leicestershire per 100,000 population has decreased from 5,050 in 2019/20 to 4,304 in 2020/21. This equates to a decrease of 260 emergency hospital admissions.
- Leicestershire continue to perform significantly better than the national average and has performed significantly better since 2011/12.

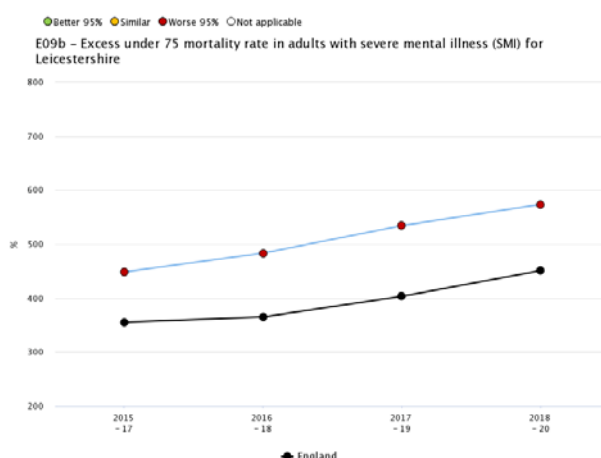

10. The shingles vaccination coverage has decreased and remains below the benchmark goal.

- The shingles vaccination coverage (71 years) in Leicestershire has remained below the benchmarking goal of 50%, having decreased from 49.8% in 2018/19 to 48.8% in 2019/20. This is slightly higher than the national average of 48.2%.

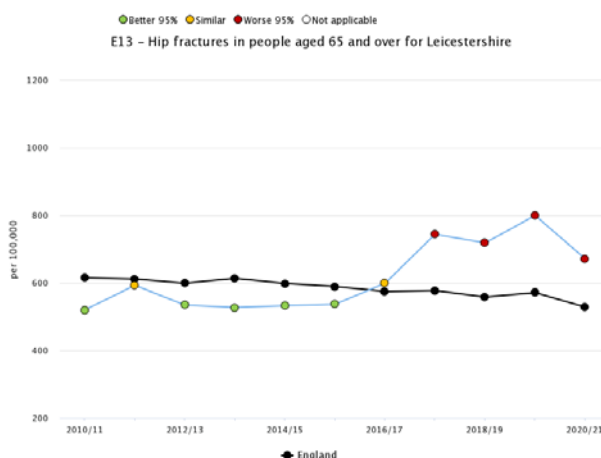

11. The excess under 75 mortality rate in adults with severe mental illness (SMI) has increased and remains significantly worse than the national average.

- The excess under 75 mortality rate in adults with SMI has increased from 534.3% in 2017-19 to 573.6% in 2018-20. Leicestershire continues to perform significantly worse than the national average of 451.0% and has performed significantly worse since the recording of this indicator began in 2015-17.

12. The rate of hip fractures remains significantly worse than the national average in people aged 65 and over and 80 and over.

- The rate of hip fractures in people aged 65 and over per 100,000 population in Leicestershire has decreased from 800 in 2019/20 to 672 in 2020/21, equating to a decrease of 170 hip fractures. Leicestershire continues to perform significantly worse than the national average of 529 hip fractures per 100,000 population aged 65 and over and has been performing significantly worse since 2017/18.
- Over the last five data points, the trend of the rate of hip fractures aged 65+ in Leicestershire has witnessed no significant change.

- The rate of hip fractures in people aged 65-79 per 100,000 population in Leicestershire has decreased from 294 in 2019/20, where Leicestershire performed significantly worse than England, to 227 in 2020/21. This equates to a decrease of 60 hip fractures. Leicestershire now performs statistically similar to the national average of 219 hip fractures per 100,000 population aged 65-79.
- Over the last five data points, the trend of the rate of hip fractures aged 65-79 in Leicestershire has witnessed no significant change.

- The rate of hip fractures in people aged 80 and over per 100,000 population in Leicestershire has decreased from 2,266 in 2019/20 to 1,960 in 2020/21, equating to a decrease of 110 hip fractures. Leicestershire continues to perform significantly worse than the national average of 1,426 hip fractures per 100,000 population aged 80 and over and has been performing significantly worse since 2017/18.
- Over the last five data points, the trend of the rate of hip fractures aged 80+ in Leicestershire has witnessed no significant change.

Appendix 1: Performance Summary

This release of the PHOF contained 192 indicators. The overall findings are summarised below.

Overall performance across Leicestershire is significantly better than the England average or against a benchmarking goal for 88 of the indicators presented in the PHOF. Performance is significantly worse for 19 indicators and these indicators need to show improvement.

1. All Indicators - Leicestershire Performance Against National/Benchmark

Currently, performance is significantly worse for 19 indicators and these indicators need to show improvement.

- B02a – School readiness: percentage of children with free school meal status achieving a good level of development at the end of Reception
- B02b – School readiness: percentage of children with free school meal status achieving the expected level in the phonics screening check in Year 1
- B06b – Adults in contact with secondary mental health services who live in stable and appropriate accommodation
- B08c – Gap in the employment rate for those in contact with secondary mental health services and the overall employment rate
- C06 – Smoking status at time of delivery
- C07 – Proportion of New Birth Visits (NBVs) completed within 14 days
- C08a – Child development: percentage of children achieving a good level of development at 2-2½ years
- C08b – Child development: percentage of children achieving the expected level in communication skills at 2-2½ years
- C08c – Child development: percentage of children achieving the expected level in personal-social skills at 2-2½ years
- C24n – Newborn and Infant Physical Examination Screening – Coverage
- C26a – Cumulative percentage of the eligible population aged 40-74 offered an NHS Health Check
- C26c – Cumulative percentage of the eligible population aged 40-74 who received an NHS Health Check
- D02a – Chlamydia detection rate / 100,000 aged 15 to 24
- D04e – Population vaccination coverage – HPV vaccination coverage for one dose (12-13 years old) (Male)
- D06c – Population vaccination coverage – Shingles vaccination coverage (71 years)
- E09b – Excess under 75 mortality rate in adults with severe mental illness (SMI)
- E13 – Hip fractures in people aged 65 and over
- E13 – Hip fractures in people aged 80+
- E15 – Estimated dementia diagnosis rate (aged 65 and over)

2. All Indicators – Leicestershire's Performance is Getting Worse

From August 2016, markers of significant trend were added to the PHOF. When there are at least five consecutive non-overlapping data points available for a proportion or crude rate indicator, a chi-squared statistical test for trend is carried out on the most recent five points. If there is no significant trend in the most recent five points, the test is redone, including an additional (sixth) point, and so on, going further back until the full series has been tested.

Currently there are 6 indicators that have a significant worsening trend.

- C24a – Cancer screening coverage – breast cancer
- C24c – Cancer screening coverage – cervical cancer (aged 50 to 64 years old)
- D02a – Chlamydia detection rate / 100,000 aged 15 to 24
- D03c – Population vaccination coverage – Dtap / IPV / Hib (1 year old)
- D03h – Population vaccination coverage – Dtap / IPV / Hib (2 years old)
- D04e – Population vaccination coverage – HPV vaccination coverage for one dose (12-13 years old) (Female)

Notes

- Indicators that are shaded blue rather than red/amber/green are presented in this way because it is not straightforward to determine for these indicators whether a high value is good or bad.
- The Change from previous column shows whether there has been a change in value compared to the previous data point. Statistically significant changes highlighted in this column have been calculated by comparing the confidence intervals for the respective time points. If the confidence intervals do not overlap, the change has been flagged as significant.
- Recent trend refers to the analysis done in the Fingertips tool which tests for a statistical trend. Changes in this column are calculated using a chi-squared statistical test for trend. This is currently only available for certain indicator types; full details are available in the tool.
- Increases or decreases are only shown if they are statistically significant. Where no arrow is shown, no comparison has been made. This may be due to the fact that the required data to make the comparison is not available for the time point, or that no confidence interval values are available for the indicator.
