# Income Deprivation Affecting Children

## I Introduction

Child poverty is prominent on the government agenda. Following in Tony Blair's footsteps, Gordon Brown has pledged to tackle the issue with the aim of halving it by 2010 and eliminating it completely by 2020. However, much more action is needed if this is to be achieved. A recent government report revealed that between 2005 and 2007 the number of children living in material deprivation in England had either rose or stayed the same (DWP 2008) indicating that the government is unlikely to meet its target<sup>1</sup>.

As part of the government's priority to reduce child poverty, the *Every Child Matters (ECM)* framework (March 2004) was published<sup>2</sup>. ECM sets out an agenda for change, maintaining that eliminating child poverty is multifaceted and is not just about raising the incomes of poor families but it also needs to ensure that appropriate services are in place to support families. Subsequently all Local Authorities are required to produce a Children and Young People's Plan and in Leicestershire this plan has been incorporated into the Sustainable Communities Strategy for Leicestershire (2008)<sup>3</sup>. The plan supports the *ECM* agenda, outlines actions to be taken and identifies key priorities for services affecting children and families.

The Indices of Deprivation provide a means for determining the level of deprivation in an area<sup>4</sup>. They are particularly valuable as they enable the measurement of change over time and represent one of the few consistent ways in which areas can be measured against each other for funding and grants. Additionally, they are an ideal tool for informing policy. The present report provides an analysis of the Income Deprivation Affecting Children (IDAC) domain of the Indices of Deprivation (ID 2007). The report identifies potential areas for intervention within the County by measuring the proportion of children living in economically deprived households across Leicestershire. The IDAC 2004 are also included to enable a comparison of how areas have changed for IDAC since the ID 2004 were calculated.

The Government's 2008 Budget report states that the two biggest direct causes of children living in poverty are parental worklessness and low pay<sup>5</sup>. Current central government targets for reducing child poverty are set wholly against measures of households below average income. Children are defined as being below the poverty line if they grow up in a household with under 60% of the average income both before and after housing costs. In contrast, the IDAC domain of the ID encompasses worklessness indicators in addition to income support indicators. Consequently IDAC may present a more robust picture of child poverty in Leicestershire compared to government statistics.

It is important to bear in mind that government targets and the IDAC 2007 measure only one aspect of child deprivation. In reality child deprivation consists of a collection of many interrelated factors (e.g. education, health, housing and access to services) and it cannot be captured in an absolute sense using income and worklessness indicators. Nevertheless, it is valuable to identify areas where there are concentrations of children living in income deprived households, particularly as changes in income alone can have a marked difference on a child's overall life chances (London Child Poverty Commission Report 2008)<sup>6</sup>. Intervention at an early stage can make a significant difference because as time goes on, children still living in poverty are likely to become more and more disadvantaged. Cycles of poverty tend to emulate themselves from generation to generation so it is important to try and break this cycle.

## 2 Methodology

### The Indicators

The IDAC domain of the ID is a subset of the Income Deprivation (ID) domain. The indicator measures the proportion of children aged 0 to 15 who live in households claiming worklessness and income support related Benefits\*. Benefits included in the 2007 measure are:

- Income Support
- Income Based Job Seekers Allowance
- Pension Credit

Households in receipt of the following are also included:

- Working Tax Credit with an equivalised income below 60 per cent of the national median before housing costs.
- Child Tax Credit with an equivalised income below 60 per cent of the national median before housing costs.

All measures are combined into a single score which is ranked from 1 to 32,482 for every Lower Super Output Area in England. A rank of 1 is assigned to the most deprived LSOA in England and a rank of 32,482 is assigned to the least deprived LSOA.

Unlike some ID domains, the Income Deprivation subsets include a percentage of persons living in income deprived households in each Lower Super Output Area (LSOA) and in addition to rank scores. This enables a more interesting analysis of the data by providing an indication of the actual extent of income deprivation experienced in different areas. It is important to note that the income deprivation domain measures benefit take up only. Not all households claim all the benefits available to them therefore it by no means provides an indication of the total proportion of households experiencing deprivation.

Notes:

\*Further guidance on the ID domain and sub domains can be found on the DCLG website <http://www.communities.gov.uk/corporate/>

\*\*A more detailed explanation of cartograms and their use, can be found in the Indices of Deprivation Report for Leicestershire. An area key can be found in Appendix 1.

There have been significant changes to the indicators that make up the income deprivation domain. However, in spite of these changes, the aim has been to maximise comparability with the ID 2004 to allow the measurement of change.

### Cartograms

Throughout this report cartograms are used in place of traditional maps of Leicestershire\*\*. Unlike conventional maps cartograms are based on population as oppose to geographical size. Such a methodology makes it easier to identify patterns in the data which better facilitates data interpretation. Each hexagon in a cartogram represents a Lower Super Output Area containing approximately 1,500 people and so each LSOA has an equal weighting in the map.

#### Map 2.1 : Leicestershire districts using cartograms: each hexagon is one LSOA of 1,500 people

### 3 The Broader Context

#### IDAC England Position 2007

Relative to other LSOAs in England, Leicestershire does not experience a high level of IDAC. The majority (79%) of the 396 LSOAs in the County fall amongst the 50% least deprived LSOAs in England for IDAC. Of the LSOAs which do fall amongst the most deprived in England, only one (Loughborough Bell Foundry) sits amongst the top 5% most deprived, five are amongst the 10% most deprived and fourteen are amongst the 20% most deprived. This compares to only five areas sitting amongst the 20% most deprived in England for overall deprivation. Whilst it is important to understand the context of how Leicestershire compares to the rest of the country for IDAC, the remainder of this report focuses on identifying concentrations of IDAC and change within Leicestershire.

#### IDAC County Rankings 2007

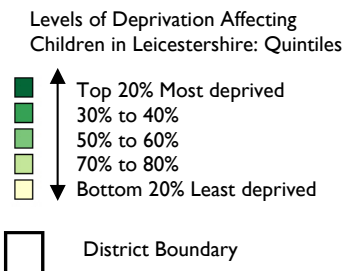

As all ID domains are measured using rank scores it is useful to provide a brief overview of rank positions within the IDAC domain to allow comparison with other domains. Map 3.1 shows Income Deprivation affecting Children for all 396 LSOAs in Leicestershire. Based on IDAC rank scores, LSOAs have been split into respective quintiles ranging from the top 20% most deprived in Leicestershire to the bottom 20% least deprived in Leicestershire. Quintiles break percentage scores down into five evenly distributed groups making it possible to easily identify the 20% least deprived and the 20% most deprived LSOAs in the County. The 14 LSOAs shaded in dark green are amongst the top 20% most deprived areas in Leicestershire for this domain. These LSOAs are largely concentrated around the Loughborough area with others dispersed in and around Ashby, Greenhill, Measham, Mountsorrel and Melton Mowbray. All of the LSOAs which are ranked amongst the 20% most deprived in Leicestershire are located in the north of the County.

## Ranking vs Percentage

Map 3.1 is based on the rank score data for the IDAC domain of the ID 2007 illustrating one way of analysing the data. Ranking is a useful way of examining an area's relative position in relation to other LSOAs within Leicestershire or England. For example, using the quintiles in Map 3.1 it is possible to clearly distinguish the LSOAs ranked most deprived in Leicestershire from those ranked least deprived. Nevertheless, measuring deprivation using rank scores is not always the best way of identifying pockets of deprivation as it does not indicate the proportion of people affected by deprivation within an area\*. Moreover, as rank positions are mutually affected it is difficult to reliably measure change over time. For example, a change in deprivation in one LSOA can misleadingly reflect a heightened variation in other LSOAs' rank positions; even if there has been very little change in the level of deprivation actually experienced. The table below shows that between 2004 and 2007 Oadby The Parade and Leicester Racecourse LSOA experienced the largest change in rank position within the County (a fall of nearly 9000 places) indicating an increase in deprivation. However, looking at percentage point change, it did not experience the largest increase in terms of the actual proportion of children living in Income deprived households. This is also true for the other top five LSOAs with large rank changes between 2004 and 2007 (see table 3.1).

**Table 3.1: Ranking Change (Top 5 LSOAs)**

LSOA name	Rank change (2004 - 2007)	% point change (increase in children living in deprived households 2004 - 2007)
Oadby The Parade & Leicester Racecourse	-8907	9%
Scraptoft	-7718	7%
Wigston Centre	-7055	11%
Wigston Newton Lane	-7001	5%
Hallaton, Great Easton & Medbourne	-6846	5%

Source: ID 2004 & 2007

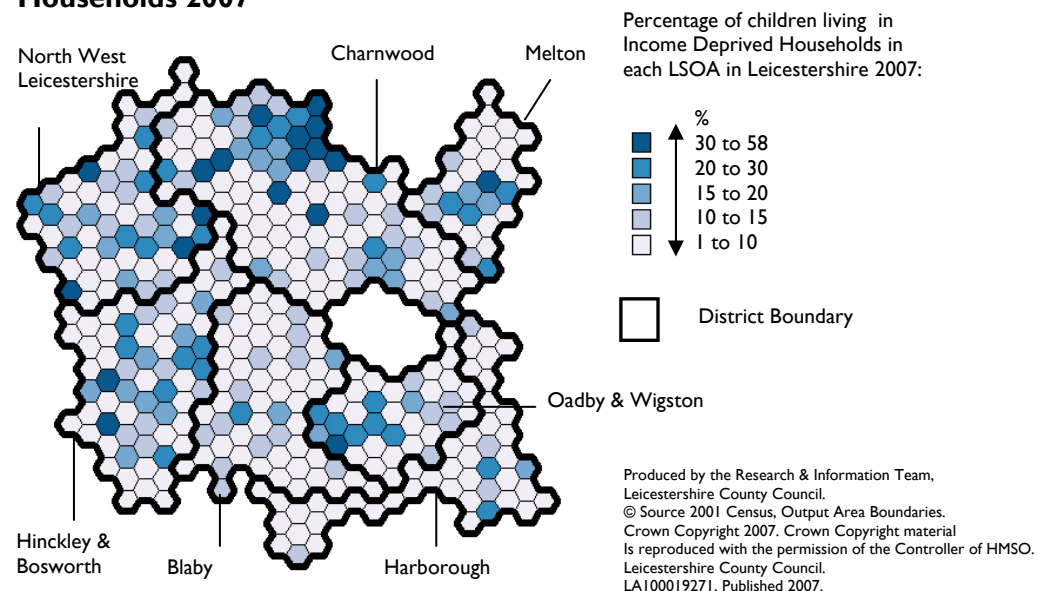

\*A change in rank does indicate a change in deprivation (DCLG) however, it may not as clearly reflect change in magnitude of deprivation experienced.

## 4 What does IDAC look like in 2007?

Measuring the percentage of children living in income deprived households represents a much more reliable way of identifying problem areas and changes in IDAC than examining a LSOA's rank score. It is also much more useful on the ground for informing strategies and policy. Consequently the remainder of this report shall largely use this methodology.

Map 4.1 illustrates the percentage of children living in Income Deprived Households within each LSOA in Leicestershire. Hexagons coloured dark blue depict LSOAs that contain the largest proportions of children living in income deprived households. Within these LSOAs, approximately 30% to 58% of children live in households affected by income deprivation. The map shows that Charnwood has a particularly high proportion of LSOAs containing children living in such circumstances, particularly in and around Loughborough. There are 14 other LSOAs containing high numbers of

**Map 4.1: Percentage of Children Living in Income Deprived Households 2007**

children living in income deprived households distributed across the County.

Conversely, areas shaded in white on the map depict LSOAs which contain a smaller proportion of children living in income deprived households (approximately 1% to 10%). Unsurprisingly the less deprived LSOAs are largely distributed across more rural areas of Leicestershire as well as the districts of Blaby and Harborough.

### Top 10 most deprived LSOAs

Table 4.1 shows a break down of the LSOAs containing the largest proportion of children living in income deprived households in Leicestershire. As illustrated in Map 4.1 a large number of these are located in and around Loughborough.

Loughborough Bell Foundry is the most deprived LSOA in the County overall for IDAC. Over half of children living in this LSOA (57%) live in

**Table 4.1: Top 10 LSOAs experiencing Income Deprivation Affecting Children (ID 2007)**

LSOA	Proportion of children living in income deprived households	Rank position within England (ranked 1 to 32482)
1 Loughborough Bell Foundry	57%	1567
2 Greenhill North East	50%	2764
3 Greenhill Centre	50%	2765
4 Loughborough Warwick Way	49%	2919
5 Loughborough Woodthorpe	48%	3134
6 Loughborough Midland Station	48%	3249
7 Loughborough Canal South	44%	4283
8 Loughborough Central Station	40%	5088
9 Loughborough Shelthorpe North	38%	5708
10 Melton Sysonby South	38%	5823

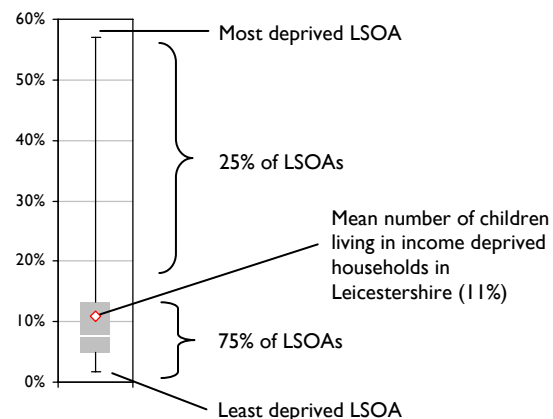

Source: ID 2007

income deprived households. The area around Greenhill also appears to experience a high level of deprivation for this domain. Half of children living in Greenhill Centre and Greenhill North East live in income deprived households. Respective rank scores indicate that all of the 3 most deprived LSOAs for IDAC in Leicestershire sit amongst the 10% most deprived LSOAs in the whole of England.

### The picture in Leicestershire as a whole

The previous sections largely focussed on areas experiencing a high level of IDAC. However the most deprived LSOAs correspond to only a quarter of the LSOAs in Leicestershire. Therefore it is also useful to understand the spread of IDAC affecting the remaining 75% of LSOAs. Chart 4.1 (below) depicts the distribution of IDAC across all of the LSOAs in Leicestershire. The chart shows that the average proportion of children living in an income deprived household in the County is 11%. The majority of LSOAs in Leicestershire (75%) are shown to experience only a small proportion of IDAC with less than 13% of children in each LSOA living in an income deprived household. Of the remaining 25% LSOAs approximately 13% to 57% of children live in income deprived households.

**Chart 4.1: Boxplot showing the proportion of IDAC in all LSOAs in Leicestershire**

## 5 How has IDAC changed during the last 3 years?

Measuring percentage point change is a more reliable way of determining changes in an area compared to measuring rank change as it indicates change in the actual magnitude of income deprivation experienced. Chart 5.1 depicts the percentage point variation in IDAC across Leicestershire between 2004 and 2007. The mean score shows that during this period there has been a small average increase of 1% point per LSOA in the proportion IDAC. Moreover, analysis of the LSOAs shows that during the 3 year period, for 50% of the LSOAs in Leicestershire change has been between -1% point and +1.5% point; indicating that IDAC in Leicestershire has remained relatively invariable.

Map 5.1 shows a visual representation of the areas that have experienced the largest change in the proportion of IDAC experienced. Red hexagons indicate LSOAs which have seen a noteworthy increase in the proportion of children living in an income deprived household (i.e. 6% points to 18% points). Areas shaded in pale yellow have either not changed or have seen a significant reduction in the percentage of IDAC.

The map shows that the largest increases in the actual proportion of IDAC during the three year period were experienced in Charnwood Borough. Specifically, Loughborough Bell Foundry and Loughborough Midland Station LSOAs saw the biggest increase. These areas saw a 17% point increase of children living in income deprived households compared to 2004. This change represents a large increase in IDAC in LSOAs that were already amongst the most deprived in the County for this domain in 2004.

Conversely, Bagworth and Thornton saw a marked fall in the proportion of children living in income deprived households since the IDAC 2004 were calculated. Nearly a quarter of children have moved out of deprivation in this LSOA indicating a notable improvement, particularly as the area was previously the ninth most deprived LSOA in the County in 2004. Fosse Park and Market Harborough South LSOAs also saw a fall in the proportion of children living in deprived circumstances during the three year period, building upon a previously low level of IDAC in these areas.

## 6 What has happened to the areas that were most deprived in 2004?

The cartograms to the right show the proportion of children living in income deprived households in each LSOA broken down into quintiles. The cartograms show that many of the areas which were amongst the 20% most deprived LSOAs experiencing IDAC in 2004 continue to be amongst the 20% most deprived in 2007. These areas are principally urban areas. There are clusters of IDAC centred around Loughborough, Melton and South Wigston which are particularly discernable as areas showing little or no sign of improvement.

Tables 6.1 and 6.2 show a break down of LSOAs experiencing the highest level of IDAC for each of the years reported in this chapter (2004 and 2007 respectively). Like the maps, the tables similarly demonstrate the consistency of areas experiencing a high proportion of IDAC. For example Greenhill North East, Greenhill Centre, Loughborough Woodthorpe and Loughborough Warwick Way have all remained amongst the top five most deprived LSOAs in the County for IDAC. Loughborough Bell Foundry represents the only new entry moving up to the most deprived LSOA in the County from previously being the seventh.

**Table 6.1: Top 5 most Deprived LSOAs (2004 IDAC)**

**Map 6.2: ID 2007: Most deprived areas in Leicestershire for Income Deprivation Affecting Children—Quintiles**

## 7 Does IDAC correlate with other forms of deprivation?

Research into child poverty suggests that deprivation experienced in childhood often follows on into later life. Therefore it is interesting to examine domains of the ID that may be associated with paths out of poverty to see if there is any relationship with IDAC. For example, do LSOAs experiencing a high proportion of IDAC manage to succeed in other domains such as education and employment? Preliminary analysis of rank scores for Leicestershire suggests not. Of the LSOAs that rank amongst the 20% most deprived in Leicestershire for IDAC 68% also sit amongst the top 20% most deprived LSOAs for education, skills and training deprivation (defined by low educational achievement and fewer persons entering post 16 education). This suggests that a high level of IDAC may be symptomatic of increased education, training and skills deprivation. For example, nearly all of the ten most deprived LSOAs in Leicestershire for IDAC also feature amongst the 20% most deprived LSOAs for education deprivation with the exception of Loughborough Bell Foundry LSOA.

Analysis of employment deprivation alongside IDAC reveals similar findings; 78% of LSOAs in the top 20% most deprived for IDAC also sit amongst the 20% most deprived LSOAs for employment deprivation. However there may be a degree of overlap between the employment and IDAC domain of the ID as both indicators contain a measure of Job Seekers Allowance claims made.

The correlation between areas experiencing a high level of IDAC and a high level of education and/or employment deprivation supports the idea that deprivation in childhood is multi-dimensional and often initiates cycles of deprivation that are hard to break out of. Hence tackling cross-cutting issues such as education and employment will play a key role in offering young people and adults the best chance of an effective and sustainable route out of poverty.

## 8 Conclusion and Recommendations

Analysis of the IDAC domain of the ID 2007 shows that compared to England, Leicestershire does not experience a high level of IDAC. However, there are some pockets of deprivation that exist. These are principally located in and around urban centres for example, Loughborough, Melton Mowbray and the Greenhill area of Coalville.

Patterns of IDAC appear to have changed little since the ID 2004 were calculated. Many areas that were amongst the most deprived in 2004 have remained amongst the most deprived in 2007. Nevertheless the report does cover a relatively short period of time (3 years) which is perhaps not long enough to document change. Hence future indices will offer a particularly useful medium for identifying LSOAs experiencing a persistence of IDAC.

The present report comments only on what the data shows, it does not necessarily correspond to what is happening on the ground in terms of interventions. Therefore it would be useful to collect other types of data or anecdotal evidence from the area, for example perceptions of child poverty. Poverty can manifest itself in many different ways which will vary from child to child and area to area. The IDAC domain of the ID 2007 is just one of the method of measuring child poverty.
