Report Overview

The report has been produced to help describe the adult offending and reoffending population of Leicester, Leicestershire and Rutland. It is designed to identify who is more likely to be an offender and which offenders are most likely to reoffend, based on the demographics of the individual offenders, characteristics of the communities in which offenders live and the criminogenic needs that these offenders have.

The findings show that there are a handful of neighbourhoods within both Leicester City and Leicestershire that have more resident offenders and reoffenders. However, it is difficult to target offenders at a neighbourhood level as it is unlikely that offenders will have the same demographics and criminogenic needs at such a local level.

The results of the analysis provide a focus for targeted interventions to help reduce adult reoffending, by identifying those adult offenders within Leicester, Leicestershire and Rutland who are most likely to reoffend. The analysis clearly identifies several groups within the Probation Area caseload, who are more likely to reoffend compared to the rest of the adult offender population, describing both the criminogenic needs and demographics of these individuals.

I. Introduction

Adults and young people convicted of offences are often some of the most socially excluded within society. The majority of offenders have complex and often deep-rooted health and social problems, such as substance misuse, mental health problems, homelessness, high levels of unemployment and possibly debt and financial problems. Tackling these issues is important for addressing the offender's problems and providing 'pathways out of offending', and to break the inter-generational cycle of offending and associated family breakdown.

The importance of reducing reoffending

Reducing reoffending is fundamental to reducing crime in local communities and benefits everyone:

- every offender who becomes an ex-offender means safer streets and fewer victims
- turning people away from crime means less pressure on the resources of the criminal justice system and its delivery partners
- offenders who stop reoffending get the opportunity to repay their debt to society and improve their own life chances, as well as those of their children and families.

National Context

In April 2010 statutory changes to the Policing and Crime Act 2009 placed a statutory duty for Community Safety Partnerships (CSPs) to formulate and implement a strategy to reduce reoffending by adult and young offenders. As a result, the changes should improve CSPs access to information on offenders' characteristics and their needs in localities, enhancing the quality of strategic assessments and supporting targeted policing and interventions in appropriate places for particular community safety issues.

Access to better information will further enhance the key role CSPs can play in bringing together and co-ordinating the actions of housing providers, health services, local authorities and other key players, all of which have a critical role in cutting crime and reducing reoffending.

Local Context

Leicestershire and Rutland Probation Trust is responsible for the supervision of adult offenders in the community, and in conjunction with the Prison Service, the management of adult offenders under the age of 21 in custody, and adult offenders aged 21 and over who have been sentenced to a period of imprisonment of 12 months or longer.

This report forms part of the Partnership Strategic Assessment 2010 for Leicester, Leicestershire and Rutland. Its purpose is to provide the local Community Safety Partnerships with information about the local adult offender population, helping to understand who these individuals are most likely to be, the communities they are most likely to live in and their needs that potentially influence their likelihood to reoffend.

Purpose of the analysis

The purpose of this analysis is to provide a description of the adult offending population of the sub-region (Leicester, Leicestershire and Rutland). Identifying key demographics and offending characteristics that can help to identify those individuals who are at most risk of reoffending.

I Guidance on new duties for Community Safety Partnerships in England and Wales: Executive Summary, Home Office

2. Methodology

What do we need to know?

The framework of this report is based around the following questions

- What is the demographic profile of the local adult offender population?
- · How does this profile vary across the sub-region?
- Where are adult offenders most likely to live?
- Which adult offenders are most likely to reoffend?
- Where are adult re-offenders most like likely to live?
- How do the needs of offenders vary across the sub-region?

Data from Partner Agencies

The following key dataset has been used in the analysis to help answer the above questions.

Adult Offender Information

The data used in the analysis is based an a cohort of individuals taken from the Probation caseload for Leicester, Leicestershire and Rutland. The cohort includes those individuals on the caseload whose case was open at any point during January 2009 to September 2009. The offending behaviour of the cohort has then been tracked to December 2009 to determine whether individuals reoffended within this time period. This cohort includes 4,700 individuals.

Where available, the residential postcode of each adult offender has been used to determine which Lower Super Output Area (LSOA) and which Local Authority District they are resident in. Out of the 4,700 individuals included in the cohort, 4,012 had a residential postcode within Leicester, Leicestershire and Rutland. These 4,012 individuals form the base of the analysis presented within this report. Of the 688 offenders not included within the analysis, 227 had a postcode corresponding to a prison, 172 had a postcode outside the sub-region and 289 had an incomplete or unmatched postcode.

Contextual Data

The following information relating to the community in which each offender lives has also been included in the analysis.

Recorded Crime

The number of offences recorded by Leicestershire Constabulary within each Lower Super Output Area (LSOAs) has been used to identify areas of relatively high crime across Leicester, Leicestershire and Rutland. Appendix I shows a map to highlight the top 20% of LSOAs with the highest number of recorded offences between April 2009 and March 2010. This information has been used in conjunction with each offender postcode to determine whether an offender lives within a area with a high level of recorded crime.

Reported Incidents of ASB

The number of ASB incidents recorded by Leicestershire Constabulary within each Lower Super Output Area (LSOAs) has been used to identify areas of relatively high ASB across Leicester, Leicestershire and Rutland. Appendix I shows a map to highlight the top 20% of LSOAs with the highest number of ASB incidents between April 2009 and March 2010. This information has been used in conjunction with each offender postcode to determine whether an offender lives within a area with a high level of ASB.

Indices of Multiple Deprivation

The Indices of Multiple Deprivation (IMD 2007) is a measure of overall deprivation presented at Lower Super Output Area (LSOA) level. The overall index includes information about: income deprivation, employment deprivation, health deprivation and disability, education skills and training deprivation, barriers to housing and services, living environment deprivation, and crime. This information has been used in conjunction with each offender postcode to determine the level of overall deprivation of the areas in which offenders live.

Urban Rural

The Urban / Rural Classification (ONS 2004) provides a methodology to classify areas of Leicester, Leicestershire and Rutland according to their rurality. This information has been used in conjunction with each offender postcode to determine the rurality of the areas in which offenders live.

Output Area Classification

The Output Area Classification (OAC) provides a socio economic profile of the people living within each of the 2,994 Census Output Areas across Leicester, Leicestershire and Rutland. This information has been used in conjunction with each offender postcode to determine the demographics of he resident population within the area in which offenders live.

Data Analysis

To help identify the key issues and provide robust and consistent results, several analytical tools have been employed. Statistical techniques have been used when analysing the data to determine whether particular characteristics/demographics of offenders and their likelihood to reoffend are statistically significantly. Results presented within this report are statistically significant to the 95% level of confidence.

- Cross Tabulations have been produced using Pearson's chi-squared test to determine any
 potential relationships between offender demographics and needs and their likelihood to
 reoffend.
- **CHAID** analysis has been used to segment offenders, to identify and describe particular groups of offenders who are most likely to reoffend.
- Cartograms have been used in place of standard geographical maps. In a traditional map of Leicestershire, based on geographic area, those Lower Super Output Areas (LSOAs) with very high population density appear small and insignificant on the map, with the map becoming dominated by the large less densely populated areas. The cartogram was created in order to display data at the LSOA level without the presentation of the data being skewed by the geographical size of the area it represents. The cartograms used in this report are used to help identify where offenders and reoffenders are more likely to live. Rather than the map being based on the geographical size of an area, the size of each area or LSOA is based on the number of offenders living within it. Areas still retain their relative geographical position on the cartogram, so it allows the identification of those areas where more offenders live. Areas are also shaded according to the number of resident reoffenders, allowing the exploration of the geographical variation in the offender population in conjunction with the reoffending population.

A Glossary of terms used within the report is available on page 17.

3. Where are offenders most likely to live?

This section provides a comparison to determine where the adult offending population is more or less likely to live compared to the overall population of the sub-region. The adult offender population has been calculated as a rate per 1,000 residents¹ to provide a standardised measure of their likelihood to live within different communities across the sub-region. Communities have been differentiated according to levels of deprivation, recorded crime, anti-social behaviour, rurality and demography.

Within the sub-region there are 4.1 adult offenders per 1,000 of the resident population. This figure has been used as the baseline for any comparison across different communities.

In summary, across the sub-region, adult offenders are

- more likely to live in Leicester City
- in the Leicester City, more likely to live in Beaumont Leys, City and Hinckley Road LPUs
- in Leicestershire, more likely to live in Loughborough, Hinckley & Bosworth and NW Leicestershire Districts
- more likely to live in the most deprived areas
- more likely to live in areas with high levels of crime and ASB
- more likely to live in OAC areas classed as 'Constrained by Circumstances', 'Blue Collar',
 'City Living' and 'Multicultural'

Where are re-offenders most likely to live?

The same methodology has been used to determine where the adult re-offending population is more or less likely to live compared to the overall sub-region population.

Across the sub-region the proportion of adult offenders that reoffend is 12.6%. This figure has been used as the baseline for any comparison across different communities.

In summary, across the sub-region, adult offenders are

- as likely to reoffend if they live in Leicester City, Leicestershire or Rutland
- almost twice as likely to reoffend if they live within the City LPU
- more likely to reoffend if they live within Loughborough
- less likely to reoffend if they live within one of the least deprived areas
- · more likely to reoffend if they live within an area with a high level of crime
- more likely to reoffend if they live within an area with a high level of ASB
- equally likely to reoffend in both urban and rural areas
- more likely to reoffend if they live within an OAC 'Multicultural' area
- less likely to reoffend if they live within an OAC 'Prospering Suburb' area

Appendix I: shows the maps to identify the areas of deprivation, crime and ASB.

Appendix 2: shows cross-tabulation of demographic data to compare the offender population to the resident population of the sub-region.

ı

Each circle within the cartograms below represent a Lower Super Output Area (LSOA) of Leicestershire or Leicester City. The size of the circle is proportionate to the number of adult offenders resident within the LSOA. The shading of the circle corresponds to the number of reoffenders resident within the LSOA.

Basic Rule: Large dark circles are where there are more offenders and more reoffenders resident, compared to other areas of Leicestershire and Leicester City.

Figure 1: Cartogram showing the number of offenders and re-offenders by Lower Super Output Area: Leicestershire

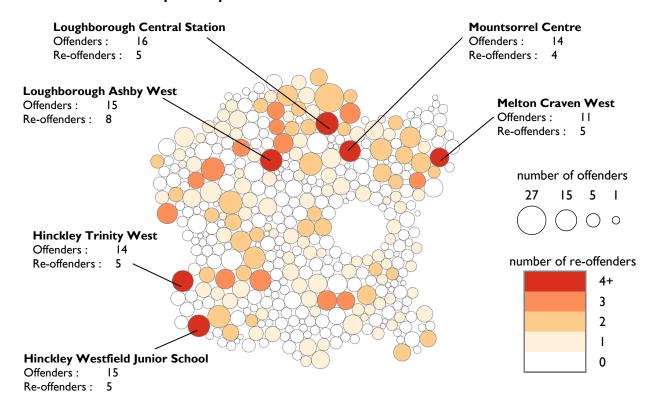

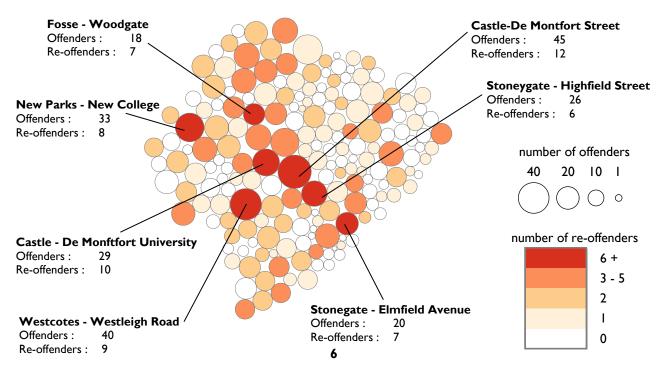

Figure 2: Cartogram showing the number of offenders and re-offenders by Lower Super Output Area: Leicester City

5. Profile of the probation caseload

Figure 3 shows the demographic profile of offenders across Leicester, Leicestershire and Rutland. It also identifies any significant differences in offender demographics between the Leicester City caseload and the Leicestershire and Rutland caseload.

Key demographics:

- Most offenders are male
- Most offenders are aged 20 to 39 years
- One third of offenders are BME, with half of these being Asian or Asian British
- One third of offenders live within the most deprived areas
- One third of offenders live within the areas with the highest levels of crime
- One third of offenders live within the areas with the highest levels of ASB

Key differences:

- Significantly more BME offenders in the City, but not White Other
- The proportion of offenders living in the most deprived areas of Leicestershire and Rutland is higher compared to the overall caseload proportion
- A higher proportion of Tier 3 offenders in Leicester City
- A higher proportion of offenders are on Licence in Leicester City

See Appendix 3 for the full data set

- % The percentage figure represents the proportion of within each of the demographic categories within the whole Probation Area.
- ▲ an upward red arrow highlights where the proportion of offenders in Leicester City or Leicestershire and Rutland, within a particular demographic, is significantly¹ higher compared to the rest of the caseload
- a downward green arrow highlights where the proportion of offenders in Leicester City or Leicestershire and Rutland, within a particular demographic, is significantly lower compared to the rest of the caseload

Profile of the probation caseload: Leicestershire & Rutland

Figure 5 shows the demographic profile of offenders across the nine Local Policing Units (LPUs) within Leicestershire and Rutland. It also identifies where there are any significant differences in offender demographics between each LPU caseload and the overall Leicestershire and Rutland caseload.

Key differences:

- A higher proportion of offenders aged 40 years and over in Harborough District
- A higher proportion of BME offenders in Loughborough and Oadby and Wigston LPUs
- A higher proportion of reoffenders live within Loughborough
- A higher proportion of Tier I offenders live within Blaby LPU
 - A lower proportion of offenders are on License within NW Leicestershire
- A higher proportion of offenders with an index offence of an acquisitive crime live within Loughborough LPU • 9

See Appendix 5 for the full data set

- % The percentage figure represents the proportion of offenders within each of the demographic categories within Leicestershire and Rutland.
- an upward red arrow highlights where the proportion of offenders in Leicester City or Leicestershire and Rutland, within a particular demographic, is significantly higher compared to the rest of the caseload
- Leicester City or Leicestershire and Rutland, within a particular demographic, • a downward green arrow highlights where the proportion of offenders in is significantly lower compared to the rest of the caseload
- differences are statistically significant to the 95% level of confidence

6. Who is more likely to reoffend?

In Leicester, Leicestershire and Rutland 12.6% of offenders on the caseload have reoffended, during the study period. Figure 6 shows how this percentage varies for different demographics and offender characteristics. It also provides a comparison of the proportion of reoffenders for each demographic for Leicester City and Leicestershire and Rutland.

See Appendix 6 for full dataset

- An upward **red arrow** highlights where a significantly high proportion of a particular offender demographic have reoffended compared to the overall caseload
- A downward green arrow highlights where a significantly low proportion of a particular offender demographic have reoffended compared to the overall caseload

Demographics and Characteristics that contribute to the likelihood of reoffending

Individual analysis of each separate demographic and offending characteristic of offenders highlights the following:

- PPOs are more than 3 times as likely to reoffend compared to the overall caseload
- The proportion of County/Rutland based PPOs who reoffend is significantly higher relative to the proportion of City based PPOs who reoffend.
- Tier 4 offenders are almost three times as likely to reoffend compared to the overall caseload
- Offenders under the age of 20 are almost twice as likely to reoffend compared to the overall caseload
- Offenders with an index offence categorised as an acquisitive crime or breach are almost twice as likely to reoffend compared to the overall caseload
- Tier 3 offenders are more slightly likely to reoffend compared to the rest of the caseload
- Offenders living within an area with high levels of crime or ASB are slightly more likely to reoffend compared to the overall caseload

Collectively analysing the demographics and offending characteristics of offenders identified the following groups of individuals who are most likely to reoffend. These are shown in Figure 7.

Figure 7: Groups of the offender caseload identified as those most likely to reoffend

	description of group	likelihood of reoffending (compared to rest of caseload)	number o individuals	
ı	Tier 4 offenders who are classed as PPOs	3½ times as likely	Leicester City Leicestershire Rutland	52 47 0
2	Tier 3 offenders, commiting acquisitive offences, living in areas with higher than average levels of ASB	2½ times as likely	Leicester City Leicestershire Rutland	162 106 0
3	Tier 2 offenders under the age of 20 years	2 times as likely	Leicester City Leicestershire Rutland	75 81 I
4	Tier 4 offenders who are not classed as PPOs	l½ times as likely	Leicester City Leicestershire Rutland	63 28 2
5	Tier 3 offenders who commit motoring, criminal damage, drugs or breach offences that are on a Community Order	l½ times as likely	Leicester City Leicestershire Rutland	293 204 3

Geographical variation in reoffending

There was no variation in the likelihood of reoffending by demographic or offending characteristic between Leicester City and Leicestershire and Rutland. This suggests that the reoffending behaviour of the caseload is determined more by the demographic of the individuals, their offending characteristics and the characteristics of the neighbourhood they live in rather than the administrative geography in which they live.

7. Profile of the Probation caseload: Offender Needs

Offenders have a variety of needs, some of which are directly related to their offending behaviour. Using the information collated from the OASys¹ assessment of offenders, this section aims to help understand the prevalence of these needs across the sub-region. It also aims to identify the combinations of needs that are most likely to contribute to the likelihood of an offender reoffending.

Figure 8 shows the proportion of offenders with each need as determined by their OASys assessment.

Leicestershire & Rutland Whole Probation Area Charnwood (Excl. Lough) NW Leicestershire Leicester City Leicester City Oadby & Wigston Beaumont Leys Loughborough Hinckley Road Welford Road Harborough Spinney Hill Hinckley & Melton Rutland Blaby City % % % Need: Thinking 53.8 56.9 50.4 Yes **Need: Education** Yes 49.0 56.0 41.2 49.7 52.7 46.3 V **Need: Relationships** Yes 42.8 46.2 39.1 Need : Lifestyles Yes 39.4 34.8 Need : Attitudes 43.6 Yes Need : Alcohol Yes 33.5 30.1 ▼ 37.2 Need : Drugs 25.1 26.5 23.5 Yes 23.3 25.8 20.4 **Need: Accomodation**

Figure 8: Offender needs by Probation Area and Local Policing Unit

Figure 8 shows the largest proportion of offenders had a 'Thinking' need, down to the smallest proportion with an 'Accommodation' need. It should be noted that individual offenders can have more than one identified need.

Key Differences:

- Offenders within Leicester City are more likely to have one of the following needs or combination of needs; education, relationships, lifestyle, attitudes, and accommodation needs, compared to rest of the Probation Area.
- Offenders in Leicestershire and Rutland are more likely to have an alcohol need compared to the rest of the Probation Area.
- Offenders in the City LPU are more likely to have one of the following needs or combination
 of needs; education, lifestyle, attitudes, drugs and accommodation needs, compared to other
 Leicester City LPUs.
- Similarly in Loughborough LPU offenders are more likely to have one of the following needs or combination of needs; education, lifestyle, drugs and accommodation needs, compared to other Leicestershire and Rutland LPUs.
- Compared to other LPUs in Leicester City, offenders living within the Hinckley Road LPU are more likely to have an alcohol need
- Compared to other LPUs in Leicestershire and Rutland, offenders living in Hinckley and Bosworth are more likely to have an accommodation need.

See Appendix 7 for the full data set

Which offender needs are more likely to contribute to reoffending?

The overall proportion of offenders in Leicester, Leicestershire and Rutland, who reoffended in the period of study is 12.6%. This figure does not vary significantly when comparing the caseload of Leicester City with the caseload of Leicestershire and Rutland. However, Figure 9 shows the proportion of offenders who reoffend varies according to their needs.

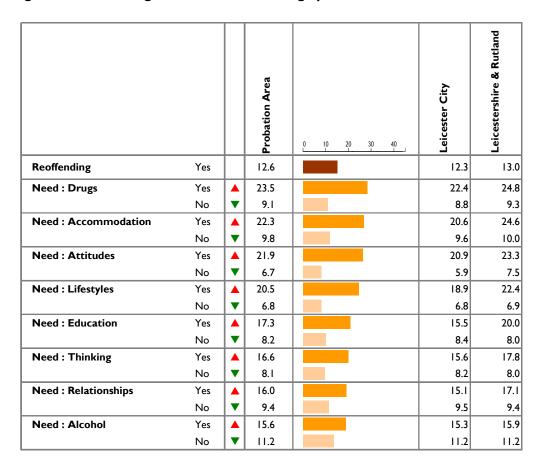

Figure 9: Percentage of offender reoffending by need

Key Differences:

- Compared to the overall caseload, offenders identified as having any of the eight needs are significantly more likely to reoffend compared to those who don't have that need.
- When comparing offenders within Leicester City and Leicestershire and Rutland, there are no significant differences between the proportion of offenders with each need who reoffend.
- Offenders with a drugs need are the most likely to reoffend. Approximately 1 in 4 offenders with a drugs need reoffend.
- Offenders with an alcohol need are least likely to reoffend
- The needs that discriminates best between those offenders that reoffend and those that don't reoffend are attitudes and lifestyles. Offenders with an attitude need are more than 3 times more likely to reoffend (21.9%) compared to those who do not have an attitude need (6.7%).

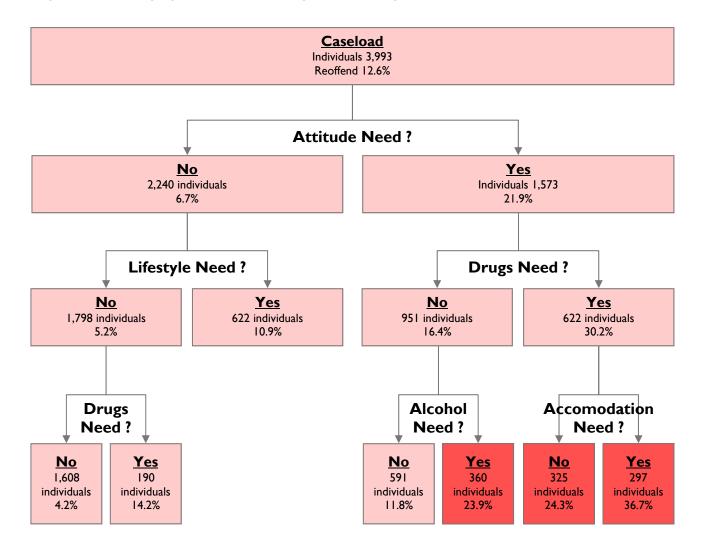

Which combinations of offender needs are more likely to contribute to reoffending?

Figure 9 looks at each offender need in isolation. However, the reality is that offender needs are more complex and individuals are more likely to have a combination of different needs.

The Leicester, Leicestershire and Rutland caseload have been segmented by their needs in order to identify the combination of needs that re-offenders are most likely to have.

Figure 10 shows the most significant combinations of offender needs that determine the likelihood of an offender re-offending. The overall proportion of offenders that offend is 12.6%, based on the 3,993 offenders resident within the sub-region. Of the eight needs, attitude need is the most significant predictor of re-offending. Individuals with an attitude need are almost twice as likely to reoffend. However, offenders with both an attitude need and a drugs need are more than twice as likely to reoffend and those with an attitude need, a drugs need and an accommodation need are almost three times as likely to reoffend compared to the overall caseload. Figure 10 identifies three distinct groups of offenders who can be identified based on the OASys needs assessment outcome, who are significantly more likely to reoffend compared to the rest of the caseload. Figure 11 (next page) shows a summary of these three groups.

Figure 10: Identifying offenders most likely to reoffend by combination needs

8. Who to target: Overall Caseload

Figure 11 provides a summary of those offenders identified as being most likely to reoffend based on the needs identified by their OASys assessment (as identified in Figure 10). It identifies and describes three discrete groups from the overall caseload.

Figure 11: Identifying offenders most likely to reoffend by combination needs

	offender needs		likelihood of reoffending (compared to rest of caseload)	number of individuals	More likely to be
ı	Attitude need : Drugs need : Accommodation need:	Yes Yes Yes	3 times as likely	297	 Aged 20 -39 PPO City & Loughborough LPU Breach or acquisitive offences Tier 3 and T4 Most deprived areas High levels of crime and ASB
2	Attitude need : Drugs need : Accommodation need:	Yes Yes No	2 times as likely	325	 Aged under 20 PPO Breach or acquisitive offences Tier 3 and T4 Most deprived areas High levels of crime
3	Attitude need : Drugs need : Alcohol need:	Yes No Yes	2 times as likely	360	 Aged under 20 NW Leicestershire Criminal damage offences Tier 3 and T4 Most deprived areas

The same method of segmentation was used to determine any variation in the combination of offenders needs that would identify any potential target groups within Leicester City or Leicestershire and Rutland.

Who to target: Leicester City Caseload

Analysis of the Leicester City caseload identified the same three offender groups as those identified for the overall caseload, as shown in Figure 11.

Who to target: Leicestershire and Rutland Caseload

Analysis of the Leicestershire and Rutland caseload identified three slightly different offender groups compared to those identified for the overall caseload. These three groups are shown in Figure 12.

Figure 12: Identifying offenders most likely to reoffend by combination needs

	offender needs		likelihood of reoffending (compared to rest of caseload)	number of individuals	More likely to be
I	Lifestyle need : Attitude need : Accommodation need:	Yes Yes Yes	3 times as likely	189	 PPO Loughborough LPU and Hinckley & Bosworth Breach or acquisitive offences Tier 3 and T4 Most deprived areas High levels of crime and ASB
2	Lifestyle need : Attitude need : Accommodation need:	Yes Yes No	2 times as likely	264	 Aged under 20 years PPO Breach, acquisitive or drugs offences Tier 3 and T4 Most deprived areas High levels of crime and ASB
3	Lifestyle need : Drugs need :	No Yes	1.5 times as likely	137	Aged 20-39 yearsPPODrugs offences

9. Recommendations

Government guidance produced in association with the introduction of the 'Reducing Reoffending' components of the Policing and Crime Act 2009 identifies three suggested levels of local activity in partnership approaches to reducing reoffending:

- 1. "Strategic planning to identify the profile of offender activity and needs in the area".
- 2. "Operational activity informed by information shared among partners, and based on a problem-solving approach to target and reduce offending and protect the public".
- 3. "At the individual level, case management....to assess individual offender need, to plan interventions based on this need, and to co-ordinate access to these interventions".

This Partnership Strategic Assessment can help to inform and steer local activity at all three of these levels.

- At the strategic level, the assessment can help inform the selection and prioritisation of annual targets identified by the sub-regional 'Reducing Reoffending Board'. It can also highlight possible gaps in existing provision, resulting in differential levels of success in reducing reoffending.
- At the 'operational activity' level, the assessment can help local Community Safety Partnerships (and other bodies) to develop and employ responses to offending which are based upon information about those priority groups assessed as representing particular risks in relation to re-offending. It can also help to identify specific geographical areas and demographic sub-groups deserving of particular attention to reduce reoffending. Specifically, the assessment can help to guide and inform local CSP-level annual targets and priorities.
- At the 'individual' level, the assessment can help to equip those with responsibility for the supervision of offenders in the community to focus extra preventive and rehabilitative attention upon those individuals and groups of individuals who are most at risk of reoffending.

Glossary of Terms

Tier

Tiering is based on a combination of factors and is actually about how intensively the case is managed-it is based on a professional judgement of the risk of harm the offender presents to the public, the likelihood of re-offending and the sentence the court has given.

Licence

A licence is the period of a custodial sentence served within the community and can contain conditions imposed by the Secretary of State that are commensurate and proportionate to managing the risk that offender poses to the public. Licences are subject to recall to prison.

Community Order

A Community Order is an order with a combination of any 12 of the requirements contained in the Criminal Justice Act 2003

Lower Super Output Area (LSOA)

Lower Super Output Areas are a unit of geography used for statistical analysis. They are developed and released by Neighbourhood Statistics. LSOAs were created with the intention that they would not be subject to frequent boundary change. This makes SOAs more suitable than other geography units (such as wards) because they are less likely to change over time. There are 606 LSOAs within Leicester, Leicestershire and Rutland.

Census Output Area

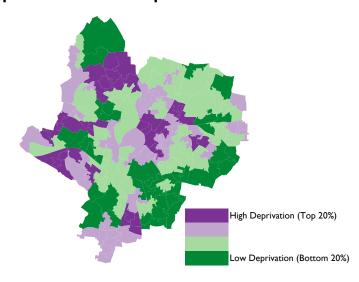

Census Output Areas are designed specifically for statistical purposes. They are based on data from the 2001 Census and were built from postcode units. Output Areas are used not only for Census output but also as the basis of Super Output Areas which have been introduced as stable and consistently sized areas for Neighbourhood Statistics.

PPO

The definition of a PPO is a local decision but is effectively decided on the number of previous convictions for acquisitive crime in a particular time period or those decided locally to be a priority.
